

Reef-Friendly Sunscreen

This chart identifies ingredients* that recent scientific studies have shown to be harmful to coral reef system. By removing these harmful ingredients, **Coral Isles Sunscreen** sets itself apart from other major brands of sunscreen. Our reef-friendly formula feels great on your skin and still provides superior broad spectrum protection from UVA and UVB.

A note about mineral blockers:

In nano-particle form, mineral blockers are toxic to marine life. Some sunscreen manufacturers claim their products are “non-nano” (less toxic), but currently there is no regulatory agency that verifies nano vs non-nano in sunscreens.

* Ingredients found in one or more of each brand’s products. Not all ingredients are contained in every product.

SUNSCREEN	Chemical Absorbers		Mineral Blockers	
	Oxybenzone	Octinoxate	Titanium Dioxide	Zinc Oxide
	<i>Coral Isles Contains NONE of the Above Ingredients</i>
